JSC Domain Restriction

Domain Restrictions specify the data location(s) where Admins can execute their assigned workflows. Domain Restrictions are records that contain one or many Domains.

Every workflow assigned to an Admin Role may be qualified by a Domain Restriction. If no Domain Restriction is applied to a workflow, the workflow can be executed anywhere.

Steps to Restricting Admin Workflows:
1. **Create Domain Restriction record(s)**
2. **Create Admin Role and Assign Workflows**
3. **Assign Domain Restrictions to individual Workflows**
4. **Create Admin Account and Assign Admin Role**

Example Domain Restrictions:
NASA: Contains all Domains in the SATERN Domain Tree
JSC: Contains the JSC Domain and all sub-Domains of JSC

Sample Domain Restriction Record JSC (Partial View of Domains Tab)

Domain Restriction ID: JSC
Description: Johnson Space Center

| Summary | **Domains** |

View the Domains for the Domain Restriction

[Edit]

Domain ID	Description	Include Sub Domains
⊟ JSC	Johnson Space Center	Yes
JSC-AA	Office of the Director	
JSC-AB	Deputy Director Office	
JSC-AC	Associate Director Office
